# **2.** June/2021/Paper\_1F/No.13

A sample of 670 adults in England were asked what side order they preferred at fish and chip shops.

A striped area indicates two equally popular side orders.

| <ul><li>(a) Based on area of land, which is the most popular side order</li></ul> | (a) | Based on area | of land, \ | which is the | most pop | ular side | order |
|---|-----|---------------|------------|--------------|----------|-----------|-------|
|---|-----|---------------|------------|--------------|----------|-----------|-------|

[1 mark]

Answer \_\_\_\_\_

(b) Give two reasons why your answer to part (a) might not be the side order that most people eating fish and chips in England prefer.

(c) Tom wants a sample of Year 7 students and a sample of Year 11 students to complete a questionnaire for him.

He considers these three sampling methods for Year 7 students.

#### Method A

Number all the students in Year 7.

Obtain 30 random numbers.

Ask the students whose random numbers come up to complete the questionnaire.

#### Method B

Wait outside the dinner hall.

Ask the first 30 Year 7 students he sees to complete the questionnaire.

#### Method C

Choose three Year 7 students from each of the 10 maths sets.

Ask these students to complete his questionnaire.

Name and compare the merits of each sampling method.

| Make a reasoned choice of which method Tom should use. | [7 marks] |

A Sixth Form college has 1000 students.

Students on different courses have different numbers of lessons.

Ben and Matt are investigating the hypothesis,

'Students with better GCSE grades have more lessons per week at the college.'

Ben is collecting the information about GCSE grades.

Matt is collecting the information about the number of lessons the students have.

(a) What type of data is 'numbers of lessons'?

Circle your answer.

[1 mark]

ordinal bivariate discrete continuous

| b) | Ben gets a list of all the 1000 students who go to the college.  He decides to choose a systematic sample of 50 students using these steps. |   |            |  |  |  |  |
|----|---|---|------------|--|--|--|--|

#### **9.** June/2021/Paper 2H/No.2

Which of the following is a measure of the **change** in the cost of goods and services? Circle your answer.

[1 mark]

Standardised score Gross domestic product

Average seasonal effect Consumer price index

#### **10.** June/2021/Paper\_2H/No.15

You will need the **Data Sheet** to answer this question.

Mark and Fiona carry out roadside safety checks on trucks.

For each truck, they record,

- · the number of wheels
- its length
- its mass.
- (a) Circle the name given to the data that they collect.

[1 mark]

bivariate multivariate secondary qualitative

(b) Mark records data from trucks travelling on one part of the A1 road.

He records data from.

- · the first 20 trucks with 6 or fewer wheels
- the first 20 trucks with more than 6 wheels.

His data are given on the Data Sheet.

| (b) (i  | State one problem with the data Mark has collected.   |                    |
|---------|---|--------------------|
|         | Suggest a solution to deal with this problem.   | [2 marks]          |
|         | Problem   |                    |
|         | Solution  |                    |
| (b) (ii | i) Mark wants to use his data to estimate the mean mass of trucks using this pa<br>A1 road. | rt of the          |
|         | Explain why the data Mark has collected is <b>not</b> likely to be suitable for this pu     | rpose.<br>[1 mark] |
|         |   |                    |
|         |   |                    |

| (c) | Fiona carries out   | ner checks on two    | roads, the A2 and the A229.  |
|-----|---------------------|----------------------|------------------------------|
| . , | I TOTIC CUITICO CUI | TOT OTTOOKS OFF CITS | roads, the riz and the rizze |

(c) (i) Some summary statistics for the lengths of trucks she checks on the A2 are shown.

| mean                      | 10.20 metres |
|---------------------------|--------------|
| median                    | 9.18 metres  |
| standard deviation (s.d.) | 2.90 metres  |

Calculate the skew of the data.

Use skew = 
$$\frac{3(\text{mean} - \text{median})}{\text{s.d.}}$$

[2 marks]

[1 mark]

Answer \_\_\_\_\_

(c) (ii) Fiona says,

"The data show positive skew, so the trucks below median length have more variable lengths than the trucks above median length."

Has Fiona interpreted the skew correctly?

Tick  $(\checkmark)$  a box.

Explain your answer.

(d)

$$s.d. = \sqrt{\frac{\sum x^2}{n} - \left(\frac{\sum x}{n}\right)^2}$$

Fiona checks the lengths of 30 trucks on the A229.

The lengths, x (metres), of these 30 trucks are summarised by

$$\sum x = 267.12$$

$$\sum x = 267.12$$
  $\sum x^2 = 2538.52$  skew = 0.43

$$skew = 0.43$$

Compare statistically the length of trucks checked on the A229 with those checked on the A2.
